

# **TAIYO BRUSHLESS AC GENERATOR**

## **LX-G LX-E LX-H SERIES**

**11.5kVA THROUGH 2250kVA**

*Dependable, high quality power.*

# TAIYO LX SERIES

## FEATURES

### 1 EXCELLENT ELECTRICAL CHARACTERISTICS

The excellent electrical characteristics can be provided by actively introducing the latest technology, adopting high quality insulating materials and theoretical design.

In particular, by improving the generator constants and adopting high-performance AVR, the stable power can be supplied to non-linear loads (thyristor, rectifier load, etc.).

### 2 HIGHLY RELIABLE & LONG LIFE

Based on the quality system conforming to ISO9001, we manufacture our products with the latest production technology.

Therefore, we guarantee high reliability and long life.

### ● LX-G/LX-E MODEL ●

### 3 COMPACT & LIGHT DESIGN

With many years of experience and achievements and the latest technology, we are designing optimally for miniaturization and weight reduction.

### 4 SELECTABLE LINE-UP & HIGHLY PERFORMANCE

The LX series is available in three models, LX-G, LX-E, and LX-H.

We have prepared the optimum performance and abundant lineup according to the output.

### ● LX-H MODEL ●

### 5 EASY MAINTENANCE

By adopting a brushless excitation method, the maintenance and inspection can be carried out very easily.

# ELECTRICAL CHARACTERISTICS

## 1 VOLTAGE REGULATION

The voltage regulation when the load is varied gradually from full load to no load at the rated power factor is within  $\pm 1.0\%$  of the rated voltage.

## 2 TRANSIENT VOLTAGE REGULATION

The maximum voltage drop is within 25% and returns to within -3% of the final steady voltage within 2 seconds when a load (100% impedance) equivalent to 100% of the rated current (power factor 0.4 or less) is suddenly applied at the rated voltage during no-load operation at the rated frequency.

## 3 ADJUSTABLE RANGE OF VOLTAGE

The generator voltage can be adjusted over  $\pm 5\%$  of the rated voltage at the rated rotation speed and no load.

## 4 MOMENTARY OVERCURRENT

The generator can be of a construction capable of mechanically withstanding a current to 1.5 times of rated current for not less than 30 sec.

## 5 OVERSPEED

The rotor can be of construction capable of mechanically withstanding a over speed to 120% of rated speed for not less than 2 min.

## 6 UNBALANCED LOAD

The generator can withstand the negative-phase-sequence current that is equivalent to 20% of the rated current of the generator.

## 7 WAVE FORM

The deviation factor of wave form does not exceed 10% with no load voltage.

## 8 SUSTAINED SHORT-CIRCUIT

The excitation system will sustain a short circuit current as follow.

50Hz: 250% 2 sec.

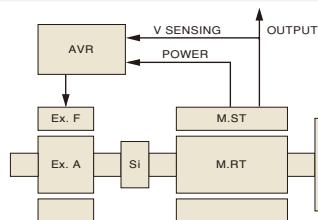

60Hz: 300% 2 sec.

Note: LX-G type can not supply it.

# EXCITATION SYSTEM

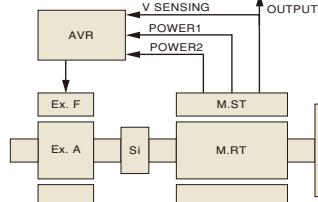

## LX-G

A part of the main stator (armature winding) output is supplied to the AVR as the power supply and voltage detection of the AVR, and the exciting current corresponding to the load is supplied from the AVR.

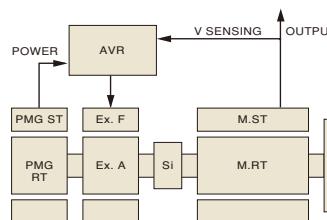

## LX-E

When the heavy load is applied, the exciting current required to supply the continuous short-circuit current is supplied from the auxiliary winding wound in the main stator. Therefore, the excellent voltage characteristics can be obtained without exciting parts such as current transformers.

## LX-H

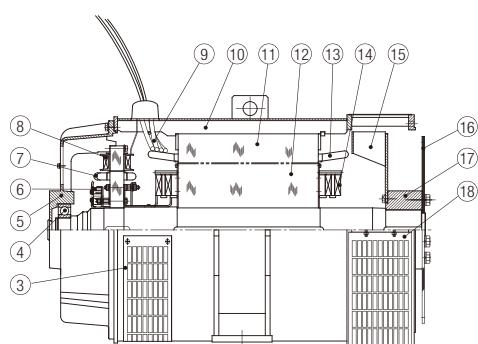

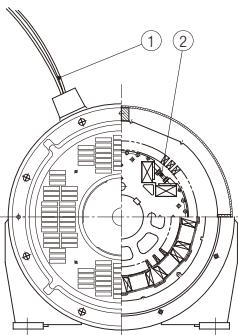

The voltage generated by the PMG is stably supplied as the power supply voltage for AVR. Therefore, the excellent voltage characteristics can be obtained even for harmonic loads such as thyristors.

M.ST : MAIN STATOR WINDING    M.RT : MAIN ROTOR WINDING    Ex.F : FIELD COIL FOR EX    Ex.A : AMATURE COIL FOR EX    Si : ROTATING RECTIFIER  
 AVR : AUTOMATIC VOLTAGE REGULATOR    PMG.ST : PERMANENT MAGNET GENERATOR STATOR    PMG.RT : PERMANENT MAGNET GENERATOR ROTOR

# COMPONENT PARTS

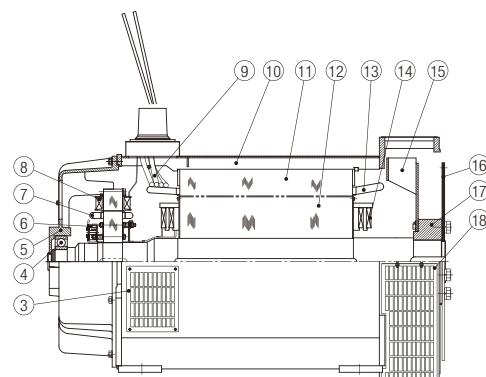

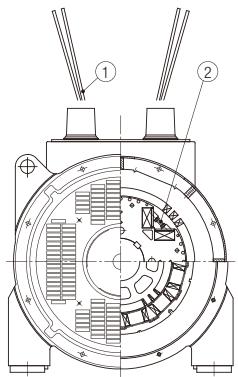

## 26B~46C

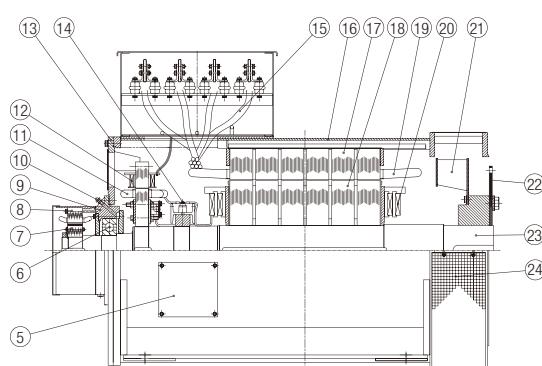

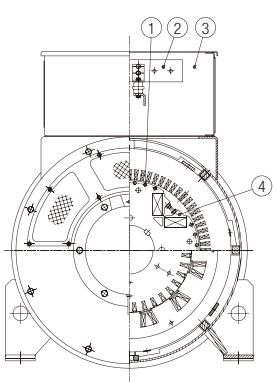

| No. | Name of Parts                |
|-----|------------------------------|
| 1   | OUTPUT CABLE                 |
| 2   | COIL SUPPORTER               |
| 3   | VENTILATION COVER            |
| 4   | BEARING                      |
| ※ 5 | END BRACKET & BEARING SHIELD |
| 6   | ROTATING RECTIFIER           |
| 7   | ARMATURE COIL FOR EX         |
| 8   | FIELD COIL FOR EX            |
| 9   | LEAD WIRE                    |
| 10  | FRAME                        |
| 11  | STATOR CORE                  |
| 12  | ROTOR CORE                   |
| 13  | STATOR WINDING               |
| 14  | ROTOR WINDING                |
| 15  | FAN                          |
| 16  | COUPLING PLATE               |
| 17  | FAN & COUPLING BOSS          |
| 18  | VENTILATION COVER(OUT AIR)   |

※ BEARING SHIELD, SEPARATED : 26B~40CS

| Output Wire:          | Free Cable End           |

## OPTIONS

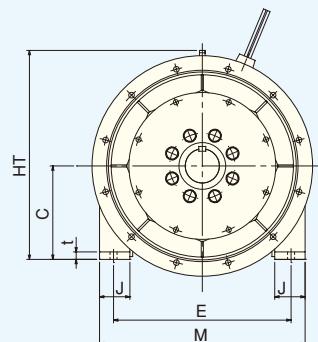

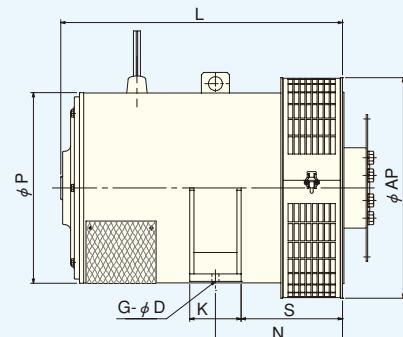

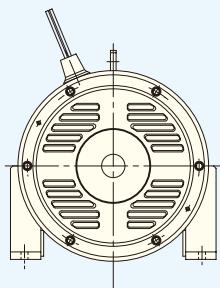

- Protection Mode (IP21~23)
- Paralell Operation Parts(AVR etc)
- Bearing/Stator Temp. Sensor & Indicator
- Space Heater for Condensation Prevention
- Coil Taping for High Humidity and Salt Damage Prevention
- Cold Region Countermeasure (-5°C ~ -20°C)
- Taco-Generator
- Double Bearings
- Special Coupling Size
- Terminal Box
- Extension Lead Wire Length (~2.5m)
- Single-Phase Wiring(Model 46C & Under )
- Another Output Cable for Single-Phase Outlet
- H-Insulation
- Special Voltage (To be Confirmed)
